

INNOVATE YOUR APPLICATIONS

ApplyNET University solves your university's current and evolving needs for online student applications. Without programming skills you can easily design application forms and export submitted applications data to your internal student database. Different application forms can be designed to differentiate between different groups of prospective students. Each application can be divided into different sections – main application, financial application, supplemental materials, etc. Review and quickly customize all application forms for each application cycle (e.g., before the start of a semester), so that they reflect the changes in your application process if you introduce any.

WHAT APPLYNET UNIVERSITY OFFERS

Comprehensive Functionality

ApplyNET University allows non-technical admissions staff to

- launch their applications online quickly and easily
- set various automatic email notifications
- review and evaluate applications online
- save time and resources
- seamlessly integrate your online application form with your web-site and your internal student records management system (e.g. Blackbaud, Access, or another database).

In addition, ApplyNET University allows each applicant to register an account with the system where her/his profile information is kept and automatically filled in every new application she/he starts.

Flexible Licensing

You obtain an exclusive license to install and use ApplyNET University's components on a single server installation within your university. Additional installations can be easily accommodated by our multi-server license. Alternatively, Eastisoft offers APPLYNET UNIVERSITY as a fully hosted subscription service on an annual or per-use basis.

Short Timelines

ApplyNET University easily integrates with any kind of in-house admissions and contacts management data base software. The standard implementation time is approximately 10 working days.

Smooth Interfacing With Existing Software

ApplyNET University interfaces with your database and other software through standard universal interfaces. It supports the popular Blackbaud student records management system natively, but most other formats are accommodated through custom integration. Please contact us for an estimate.

Valuable Features

The full ApplyNET University has a variety of features and functionalities beyond an Online Applications System.

Here are some of the modules:

- Email templates
- Auto-response templates
- Elaborate application evaluation process statistics
- Contacts management modules
- Outside reviewers functionality

INNOVATE YOUR APPLICATIONS

HOW APPLYNET UNIVERSITY WORKS

Online Applicant

Online applicants access the web form and create an account, secured by a unique username and password. The user is required to provide certain profile information that is kept as a part of the applicant's account. It is automatically filled in each new application that the applicant starts.

Creating an account ensures that the applicant can add new information to the application before submitting it or simply review the already submitted application. All applicants can print their applications at any stage before or after having submitted them.

The applicant can complete and submit a new application for each new application cycle. The applicant can review his/her answers in previous applications that he/she has filled in.

Online applicants can delete their application while still in the draft stage. Upon submitting the application, no further changes can be made by the applicant.

APPLYNET UNIVERSITY ensures the submission of complete application forms and disallows incomplete ones. It alerts the applicant to missing information and/or documents.

Each application contains a special section including a reference to an Internet payment method and details of the payments done. The Admissions Officer will be able to go to this section, check payments and checkmark if the particular payment has been received.

After submission, the applicant can use his/her account to check the status of the application and to review which documents of the application package list the Admissions office has received.

University Administrator

- > Design the application forms
- > Design email templates,
- > Set applications lists
- > Define searchable criteria both for Admissions Officer and University Administrator
- > View contacts' profiles data
- > Assign the Admissions Officers' roles
- > Search/filter contacts by predefined criteria, including last time log in and list of applications for each applicant
- > Delete inactive contacts

Admissions Officer

- > Review and checkmark in each submitted application the documents that have been received by regular mail
- > Checkmark if the application fee is received
- > Let the applicant know of the current state of his/her application and if it is complete with all required documents
- > See how many applications have been submitted for each particular application process
- > Evaluate each submitted application as approved or rejected
- > Store the information about approved and rejected applications for further reference
- > Transfer the applications to relevant software
- > Perform advanced search of applications, based on predefined criteria
- > Print applications at any time

WHAT ELSE EASTISOFT OFFERS

Training

Eastisoft conducts an online training session for the admissions officers as well as for the administrator responsible for managing the system. Training sessions cover all pertinent aspects of the system, including functionality of online applications, user roles, etc. On-site training available by request.

Ready-To-Use Setup

The system comes complete with a full set of application forms that are already customized to your particular requirements, including separate application forms for regular applicants and special applicant groups (if applicable). APPLYNET UNIVERSITY thus lets you start processing student applications right away.

Support

Eastisoft offers a full complement of support services, including additional support and maintenance services, development of added functionality, implementation of new modules, changing/adding/deleting fields in the current applications, design of new applications, etc.

INNOVATE YOUR APPLICATIONS

PRICELIST

Licensed In-House

option requires that the user has an Internet server and buys the APPLYNET UNIVERSITY license from EASTISOFT. The minimum needed web server configuration includes Windows 2000 server license, a powerful computer, and Internet connection.

Hosted Subscription

if you want to buy APPLYNET UNIVERSITY but you don't have an internet server to host APPLYNET, we can take care of all the support and hosting. This solution gives you great usage rights, yet spares the hosting expenditures for you. You are only left with taking advantage of the great functionality of APPLYNET UNIVERSITY.

	Licensed In-House		Hosted Subscription
